

DESCRIPTION

The MMS740xxx-24-C2 is part of a family of fully integrated smart motor solutions for servo motor applications. This 40mm motor integrates a permanent magnet synchronous motor (PMSM) and driver module inside.

The MMS740xxx-24-C2 supports seven commonly used motion control modes: profile position (PP), profile velocity (PV), profile torque (PT), homing (HM), cyclic synchronous position (CSP), cyclic synchronous velocity (CSV), and cyclic synchronous torque (CST). It also has six isolated I/Os for external signal input and output.

MotionLAB is an easy-to-use GUI software that allows users to flexibly optimize the design online via the USB or CAN control interface. The parameters are saved in the motor's non-volatile memory (NVM). The GUI and its user guide are available for download at www.EZmotion.co.

In addition to fully integrated smart motor solutions, the driver modules and accessories can be ordered separately for customization into different motor types.
