

DESCRIPTION

The MMS760xxx-48-R2 is part of a family of fully integrated smart motor solutions for servo motor applications. This 60mm motor integrates a permanent magnet synchronous motor (PMSM) and driver module inside.

The MMS760xxx-48-R2 supports four commonly used motion control modes: profile position (PP), profile velocity (PV), profile torque (PT) and homing (HM). It also has six isolated I/Os for external signal input and output.

MotionLAB is an easy-to-use GUI software that allows users to flexibly optimize the design online via the USB or RS-485 control interface. The parameters are saved in the motor's non-volatile memory (NVM). The GUI and its user guide are available for download at www.EZmotion.co.

In addition to fully integrated smart motor solutions, the driver modules and accessories can be ordered separately for customization into different motor types.
